

CashPRO

Financial management software

The Inepro CashPRO Software offers you a complete management tool for all your PayCons in your organization with extensive reporting capabilities and the capability of managing your products. Because Inepro is the manufacturer of both the Inepro Back Office Suite software and the PayCon terminals you get a unique integration of hard- and software which no other supplier can offer you.

The Product

CashPRO is a windows based management tool that lets you take full control of your PayCon network. It offers you full product management with some spicy functions such as: time and location based discount schemes, full featured reports and configuration of all your PayCon terminals in your network.

The environment

CashPRO can be used in various environments, ranging from locations with just one single PayCon up to multi-server, multi site organizations with dozens of PayCons. CashPRO can also be used in environments where a detailed financial overview is required, but also in those environments where you just want to limit or register the access to all or some specific services of the connected device.

Target group

CashPRO can be used by the system operator in order to plan and check resource usage across the payment network or by the administrative staff to have a clear view of the turnover generated by specific users and/or devices.

Why Inepro Back Office Suite?

CashPRO offers you a super sophisticated tool with which you can manage all the PayCons in your network regardless of the type device connected to it. Furthermore it provides you an easy method for central price and discount management and detailed and global reporting facilities.
