Cash Register Software

PosPRO

PC based cash register software

PosPRO is a Windows PC based E-POS, cash register software solution. The PosPRO software is a front office application which is operated by staff. On the back end of PosPRO it can link to CashPRO, the back office application for product, price and transaction management.

■ The Product

PosPRO is an E-POS cash register application for registration of product sales. PosPRO offers you a unique combination with the CashPRO back office environment for central product and price management along with reporting functionalities. PosPRO is hardware and language independent and it interfaces seamlessly with the Inepro PayCon smart card terminals for a cashless environment. PosPRO can be used with touch and non-touch (POS keyboard) based pc's and can work stand alone or networked with the CashPRO back office environment.

■ The environment

PosPRO can be used on a local pc, non network or in a network with the CashPRO back office functionality. PosPRO is ideal to use in schools, universities and office canteens in combination with a cashless catering environment.
